(54) Title: A LUMINAIRE WITH A LOUVER FOR CONTROLLING THE LIGHT RADIATION

(57) Abstract: A luminaire, comprising a light source (6,7) for producing light radiation leaving the luminaire through its front side. The luminaire comprises a dome-like concave reflector (1) around a central axis (2) perpendicular to said front side. The luminaire comprises a tubular louver (11), being positioned around said central axis (2) in front of the light source (6,7) and being located at least partly inside said concave reflector (1). The louver (11) has a substantial tubular wall and both sides (12,13) of the wall have a light reflecting surface. The louver (11) is connected with the remainder of the luminaire through connection means (17), which are substantially located in the area of the luminaire behind the louver (11). The connection means (17) engage the louver (11) near its back edge (15), which is directed to the light source (6,7).
